

# Insights of the RSVP movie review project using sql

---

- In this analysis we have used the Sql for data analysis of the given data set.
- Here I have analysed that which movie is being be the highest rating.
- Also find out which type of genre movie is being seen by the audience.
- According to it I have found which actors are most rated actor.
- Also done the 3 years and month wise analysis of the movies.
- By looking these stats I can suggest which movie we will be in profit and what category of it should be of it.
- For the finding the ranking in the movie we have used the rank function.
- Also find out the null values in the data by using case statements.
